L9466

## Car alternator voltage regulator

## Features

- For air and liquid cooled applications

■ DF output (inverted field monitor)

- Thermal protection

■ Fleld driver, lamp driver, relay driver, and DF (field monitor) short circuit protected

- Load response control
- Single phase autostart

## Description

The L9466 is a monolithic multifunction generator Voltage regulator intended for use in automotive charging applications.

This All Silicon Voltage Regulator regulates the output of an automotive generator by controlling the field winding current by means of a variable frequency PWM high side driver.

| T DELAY | Fault indication delay time | Delay before Lamp ON | 0.9 | 1.1 | 1.3 | s |

1. This condition can happen when the connection between the battery and VGO or the output terminal of the generator is broken. The 1.1 second delay is not required, and current is sinked by ASVR.
2. When no fault is detected the Lamp terminal is pulled up by ASVR.

## 4 Package information

In order to meet environmental requirements, ST (also) offers these devices in ECOPACK ${ }^{\circledR}$ packages. ECOPACK ${ }^{\circledR}$ packages are lead-free. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label.

ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
